KASHIR WATH

Antigravity Brief — Update the Existing Website Only

Live website reviewed: https://kasmir-psi.vercel.app/

Important: The website is already built. This task is a focused legal/policy content integration, not a website redesign or rebuild.

COPY-PASTE PROMPT FOR ANTIGRAVITY

Work in my EXISTING KASHIR WATH website repository. The live site is https://kasmir-psi.vercel.app/. The website is already designed and working. ONLY integrate/update the supplied legal and travel policy content. Do not rebuild, redesign, change the brand, or modify unrelated pages/components.

FIRST: inspect the existing codebase and current routes/content. The live site already has:
- /privacy — Privacy Policy page
- /terms — Terms & Conditions page
- /policies/booking — Booking, Cancellation & Refund Policy page (this page already includes a Force Majeure section)
- Existing shared header, navigation and footer. Footer currently links to Privacy, Terms and Booking Policy.

Use these existing pages/components and visual styles. Preserve current header/footer/navigation and all unrelated website content.

POLICY CONTENT TO ADD/UPDATE FROM THE USER-SUPPLIED SOURCE FILES (9 unique documents):
1. Terms & Conditions — update existing /terms with the complete supplied Terms & Conditions text; preserve the route.
2. Website Disclaimer & Intellectual Property Policy — new page.
3. Responsible Travel Policy — new page.
4. Travel & Safety Policy — new page.
5. Health, Safety & Risk Policy — new page.
6. Children & Senior Citizens Travel Policy — new page.
7. Force Majeure Policy — new standalone page. The existing /policies/booking page already contains a force majeure section; do NOT overwrite or damage its booking/cancellation/refund content. Keep that page intact and link to the standalone detailed policy as an additional resource.
8. Modification & Rescheduling Policy — new page. The source was supplied twice; publish only one copy.
9. Complaints & Grievance Redressal Policy — new page.

IMPORTANT EXISTING CONTENT:
- Keep /privacy unchanged unless I separately provide a replacement Privacy Policy source. Do not invent or rewrite it.
- Keep /policies/booking intact. Do not replace its Booking & Cancellation / Refund policy with the standalone Force Majeure text.
- The current /terms page has existing wording. Replace/update its policy body with the complete user-supplied Terms & Conditions, retaining the existing route, site shell and styling.
- Do not create duplicate Privacy, Booking, Terms or Modification pages.
- If a policy source is not present in the supplied files/conversation or repository, report it as missing and ask me. Never invent legal clauses.

CONTENT RULES:
- Read all supplied source documents fully before coding.
- Treat supplied text as authoritative. Preserve every clause, section heading, numbering, list, qualification and legal limitation. Do not summarise, paraphrase, shorten or add legal terms.
- Keep placeholders such as [Insert Date], [Official Business Email], [Official Website URL], [Insert Full Legal Name], [Complete Business Address] and [Insert GSTIN] exactly as supplied. Do not invent business details.
- Do not silently reconcile inconsistencies between source documents. Report any conflict for my decision.
- Ensure the duplicate Modification & Rescheduling file is consolidated into one page only.

ROUTES & NAVIGATION:
- Create a central /policies index page titled “Legal & Travel Policies”.
- Include links to all 9 unique documents listed above.
- Link the existing /terms route for Terms & Conditions. Link /privacy and /policies/booking as existing related policy pages where appropriate, but do not count them as new source documents.
- Add a “Legal & Policies” link to the existing footer. Keep existing Privacy, Terms and Booking Policy links working. Add individual policy links in a compact, accessible footer group or through the new index page; do not overcrowd the footer.
- Suggested new routes:

/policies/website-disclaimer-intellectual-property
/policies/responsible-travel
/policies/travel-safety
/policies/health-safety-risk
/policies/children-senior-citizens
/policies/force-majeure
/policies/modification-rescheduling
/policies/complaints
- Use the existing routing conventions; if a different route structure is already used, follow it and report final URLs.

DESIGN & IMPLEMENTATION:
- Match the current KASHIR WATH visual identity, typography, colours, spacing and premium heritage-led tone.
- Build on existing page templates/components. Reuse the current legal-page layout if available.
- Use one reusable policy detail template and structured content entries; avoid copy-pasted page components.
- Each page should show title, “Soulful Journeys Through Kashir”, Effective Date, Last Updated, full policy text and a clear “Back to all policies” link.
- Preserve or generate a compact contents list from actual section headings with working anchor links, consistent with the existing Terms/Privacy/Booking pages.
- Ensure responsive mobile reading, semantic headings/lists, keyboard navigation and visible focus states.
- Add page-specific SEO title and description. Do not guess canonical domain configuration.

QUALITY CHECKS:
- Test all existing and new routes, footer links and section anchors.
- Confirm /privacy and /policies/booking still work and their content is not accidentally overwritten.
- Check duplicate pages, missing sections, console errors, lint/type/build errors and mobile layout.
- Run existing project checks; do not install unnecessary packages.
- Make the smallest complete code change. At completion, report changed files, final routes, tests actually run, missing source documents and all placeholders that still need real business details. Do not claim success for checks not run.

Website review findings to respect

- Homepage already has a finished brand design, navigation and footer. Do not redesign it.
- The footer already exposes Privacy, Terms and Booking Policy links.
- Privacy is a live, separate page at /privacy. Preserve it unless a replacement source is supplied.
- Terms is a live page at /terms, but its currently published text is a different, shorter policy structure. Update its body with the full supplied Terms & Conditions while preserving the route and page design.
- Booking, Cancellation & Refund is already live at /policies/booking and includes a Force Majeure section. Preserve this page; add the separately supplied full Force Majeure policy as its own page.
- Modification & Rescheduling was supplied twice. Create one page only.

Developer note: This PDF is an implementation instruction, not legal advice. Keep the source wording intact and have final legal content reviewed before publication.
